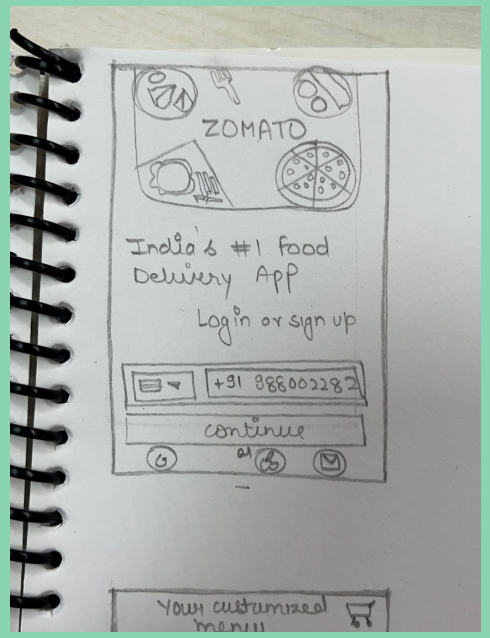
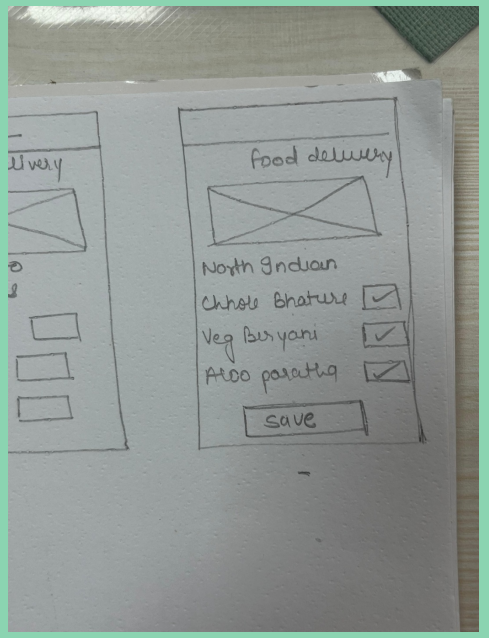
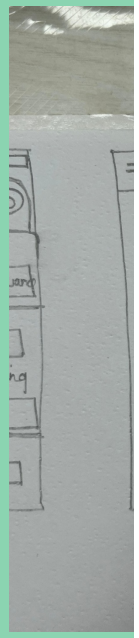
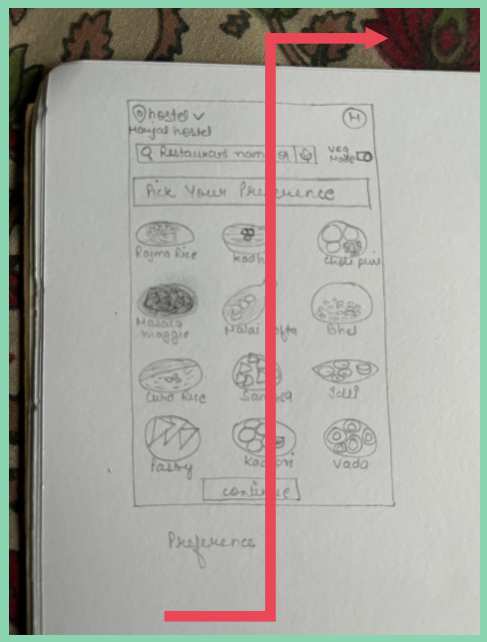
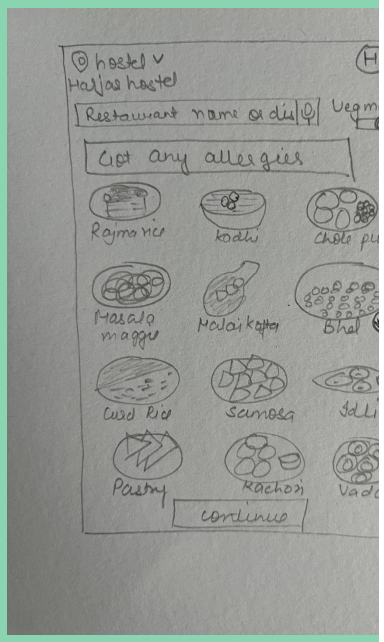
Design Concepts











Metropolis
Zomato itself uses Okra font type which is a modified variation of Metropolis
It's easy to read, clean, and gives a modern, urban feeling.
Readability at all sizes.

Color Palette Used

Our color palette matches that of Zomato food delivery app,

While the color **Red** invokes a feeling of excitement and hunger, **Green** ensures a sense of Safety and success, along side with **White** and **Grey** together supporting neutrality and clean a layout

Strength

Enhanced **Personalization.**
Improved Safety for **Users with allergies.**
Personalization Feature with **Multi Users Support.**

Weakness

- **Complex** Implementation
- Data **Accuracy** Concerns.
- Potential **Maintenance L**
  Multiple Users.

Threat

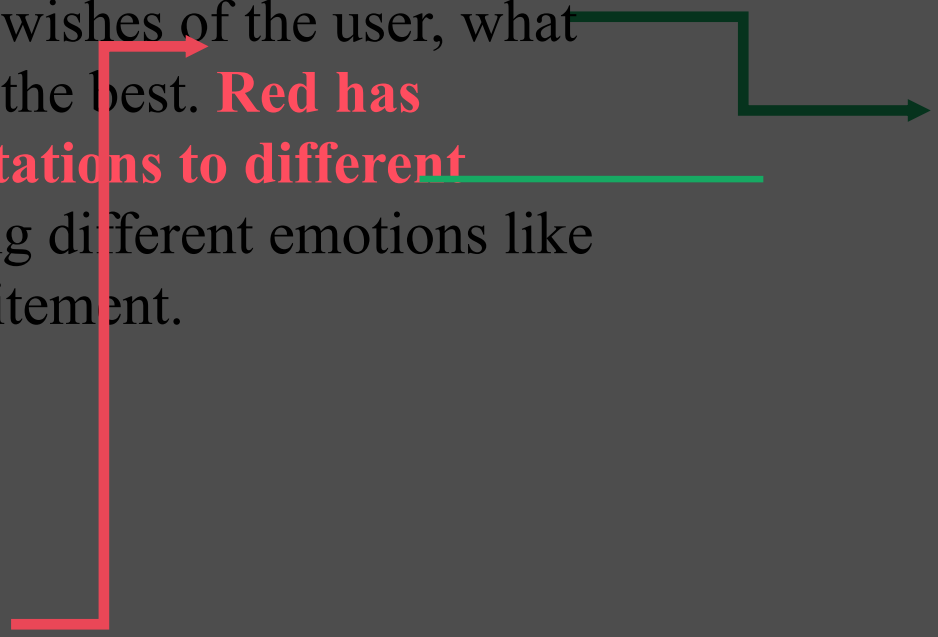
Competitor Adaptation.
Legal And Liability Risk.
Data **Privacy** Concerns Regarding Multiple Users.

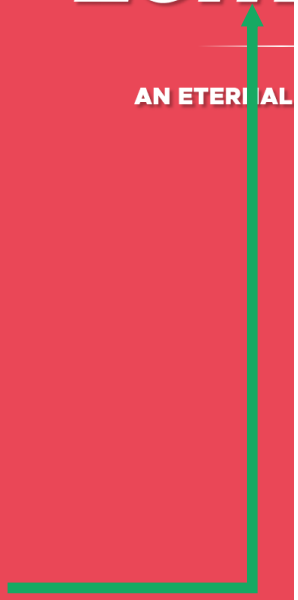
Opportunity

- **Health and Wellness** App
- **Potential Partnerships** w
- Market **Differentiation.**

Splash Screen

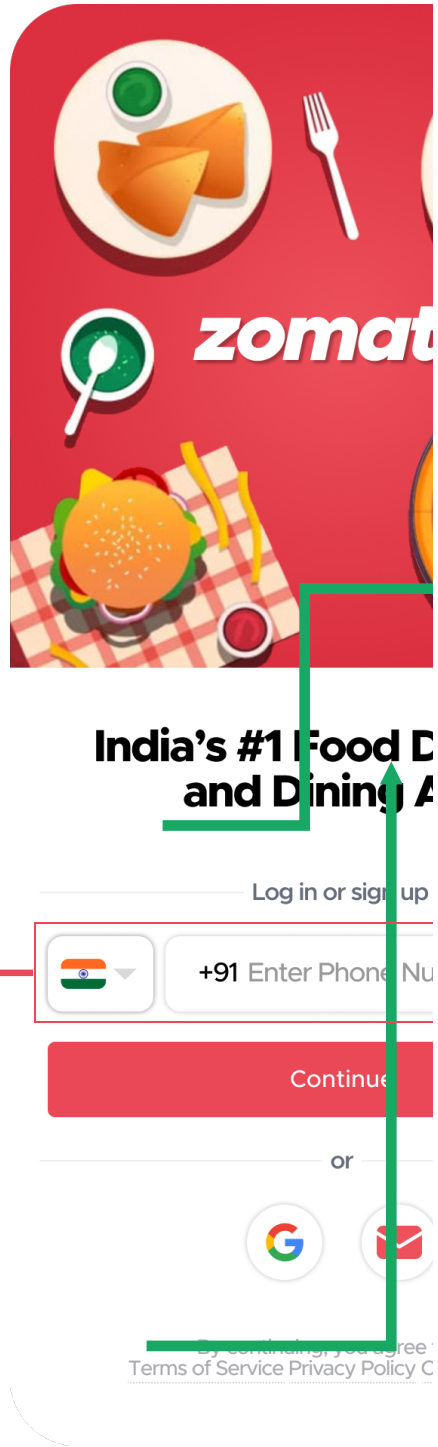
Option to customize the look of the app, according to the wishes of the user, what would suit them the best. **Red has different connotations to different people**, triggering different emotions like Hunger and Excitement.





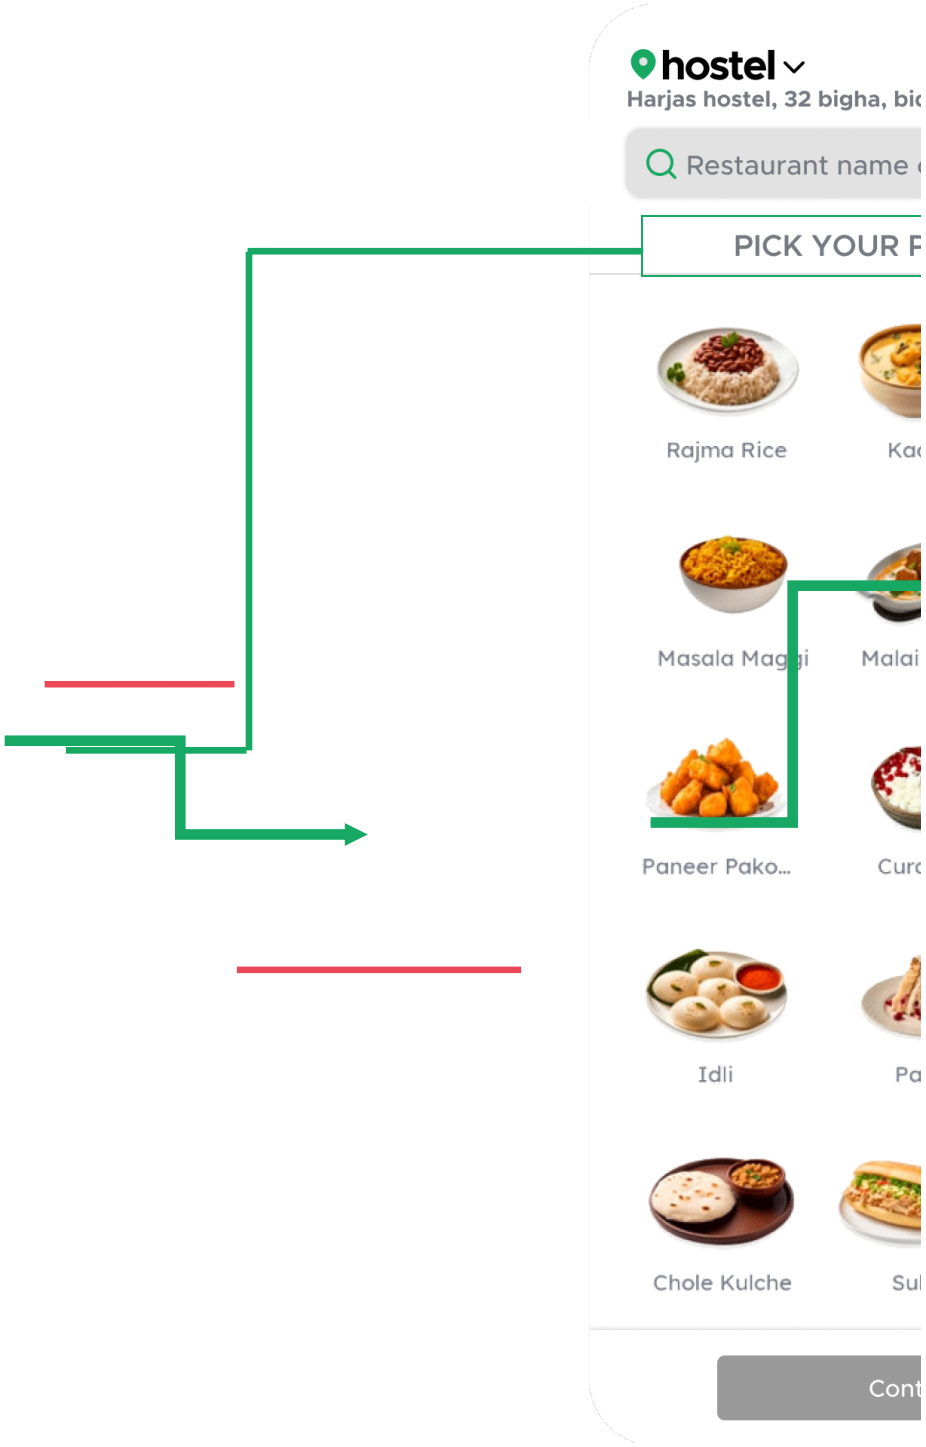
Registration

Registration **lets Zomato create a personal account for each user** so it can save their details, track their orders, and give personalized recommendations.



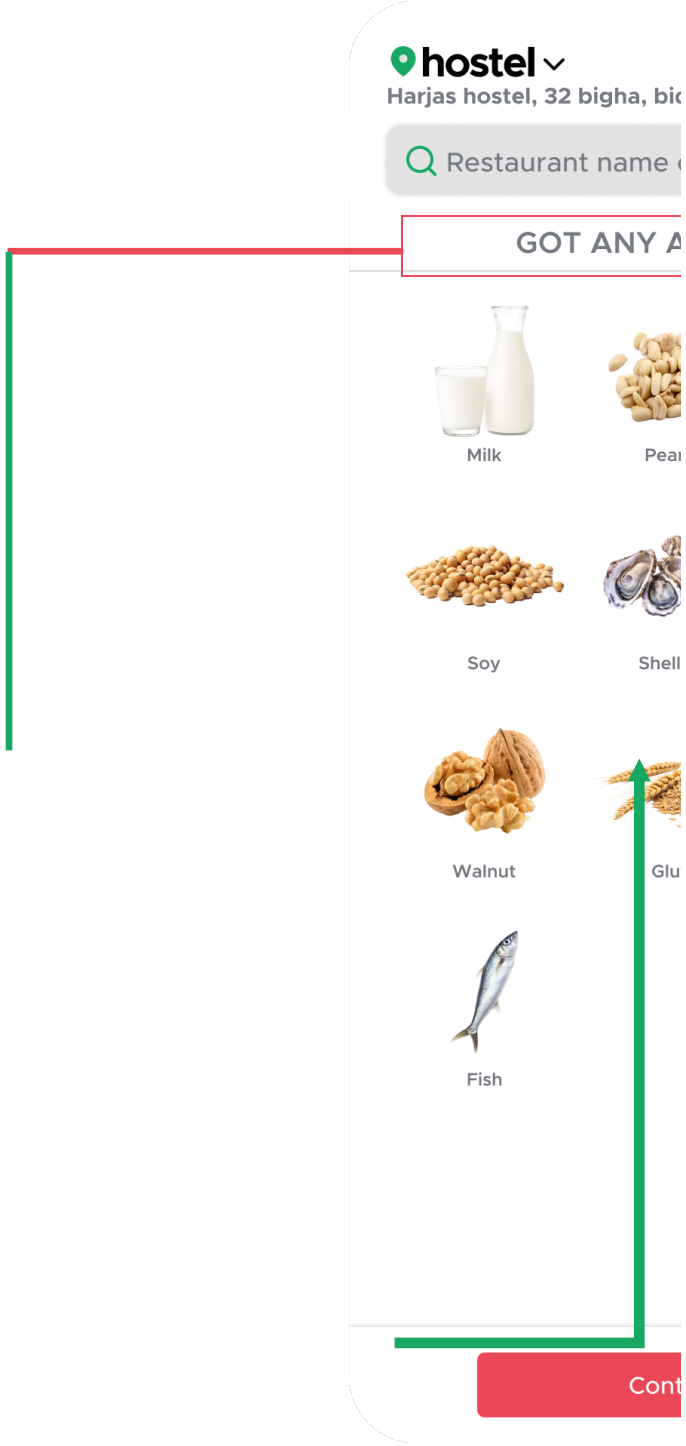
Preferences

Preference will help Zomato **store and understand your taste**, So that it can show relevant and appealing options first.



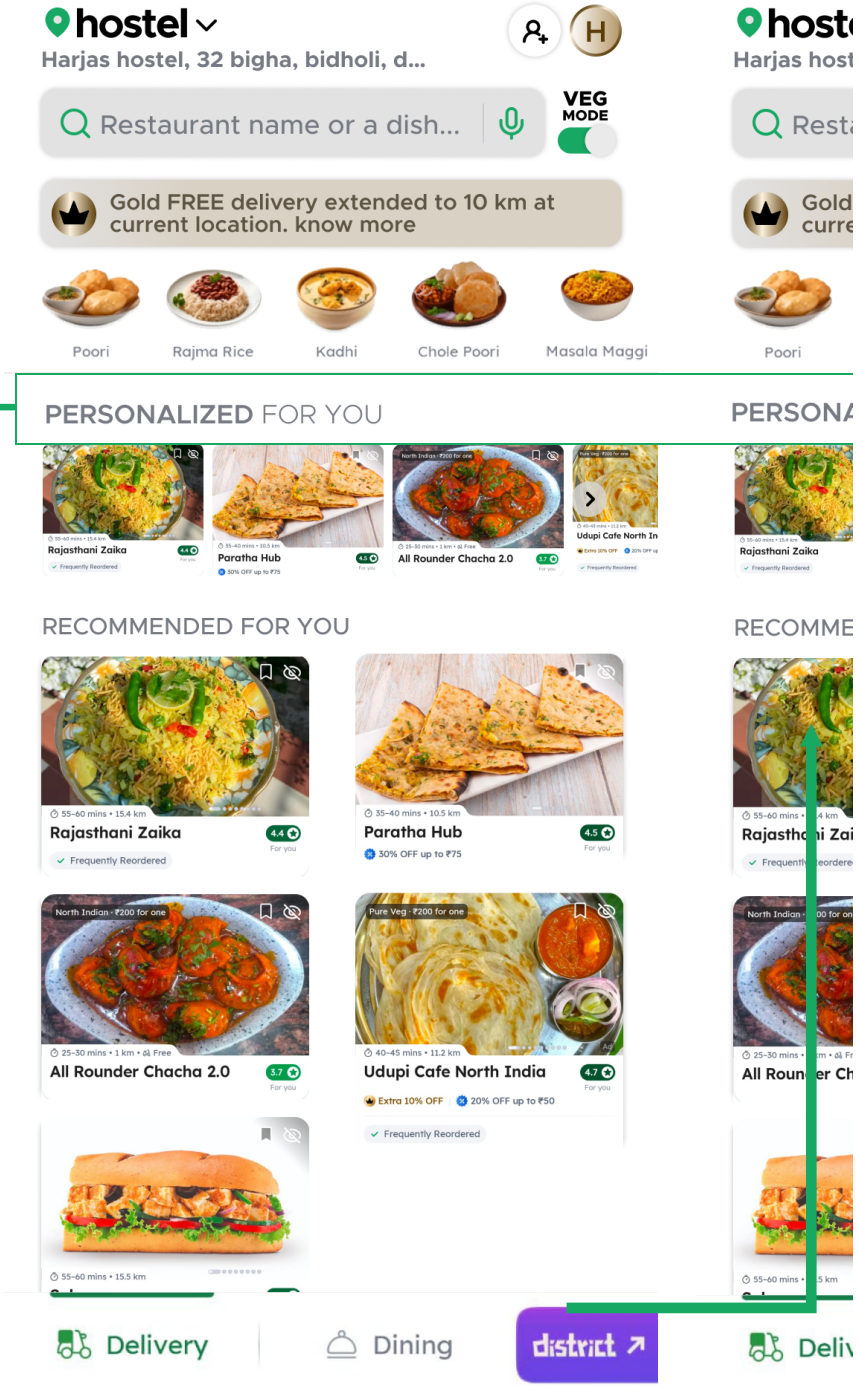
Allergies

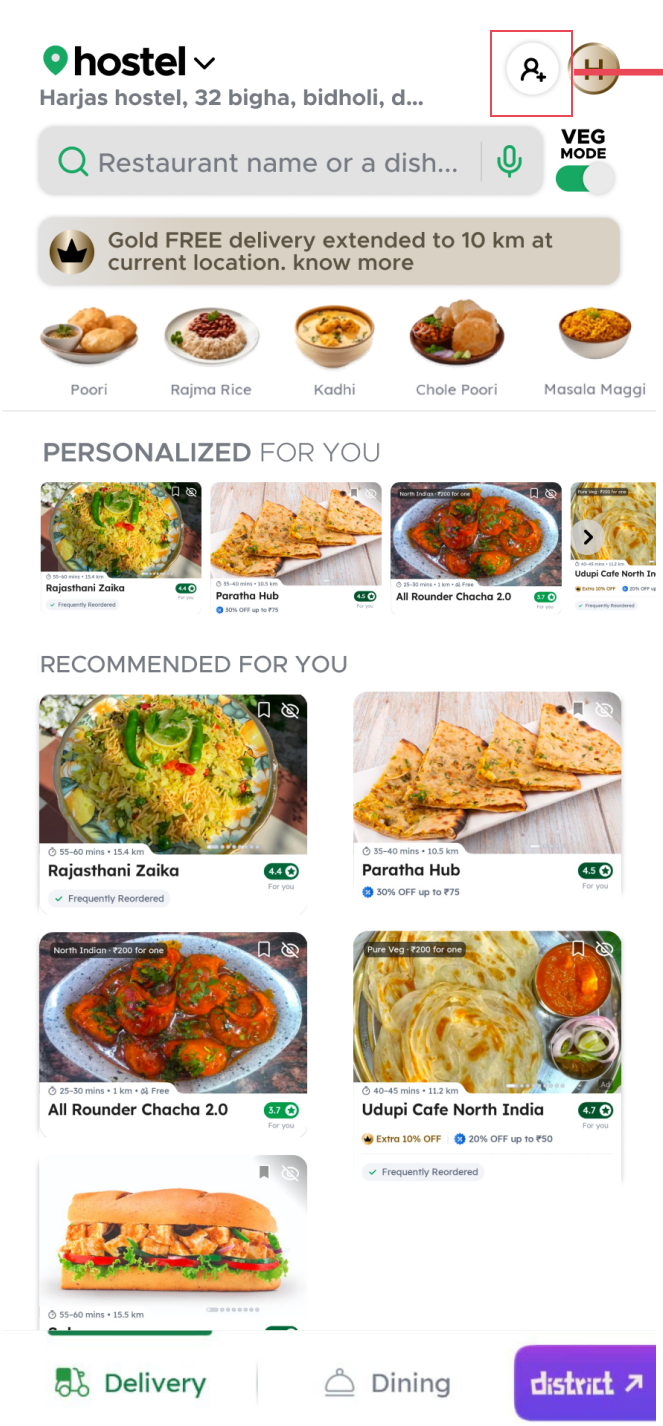
Allergies will help Zomato **to figure out foods to highlight**, So that Zomato can be more careful with the choice.



Dashboard

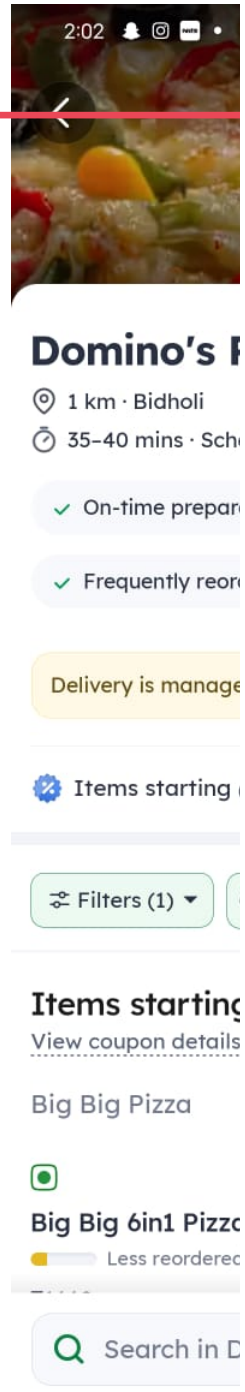
All necessary details stored help the users **identify with their preferred consciously-chosen food** type that they associate with.





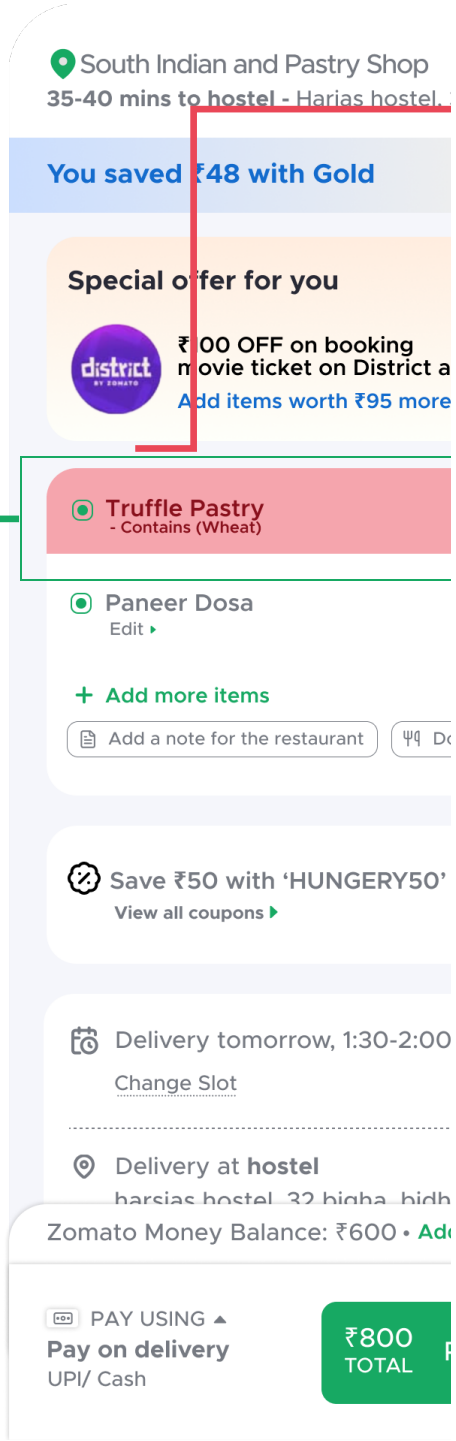
Group Order

Group order option is readily **available on both dashboard** and **restaurant menu**.



Cart

The cart is now a **cross-checking platform to signify and alert** the user on any undesired and potentially-risky ingredients.



Possible Limitation

- Strong filtering **might hide interesting food** options.
- Too **many preferences and allergies when ordering for group** might affect dashboard and cart window.
- Will require **additional backend changes**.

Future Scope

- **AI-Powered** menu recommendations.
- **Realtime Update** for allergens and preferences.
- **Group Order Optimization** to satisfy multiple users.
- **Making Data Private** to enhance trust between the app and the customer.
