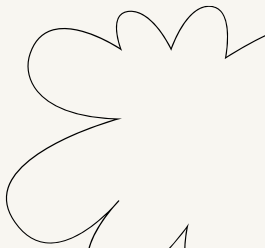
Miravi

A mirror that answers back gently

Design intent - design for transforming negative self-talk into positive self-reflection.
Focus Area - mental wellness & cognitive reframing
Platform - physical AI mirror
Methodology - user research → ideation → product development



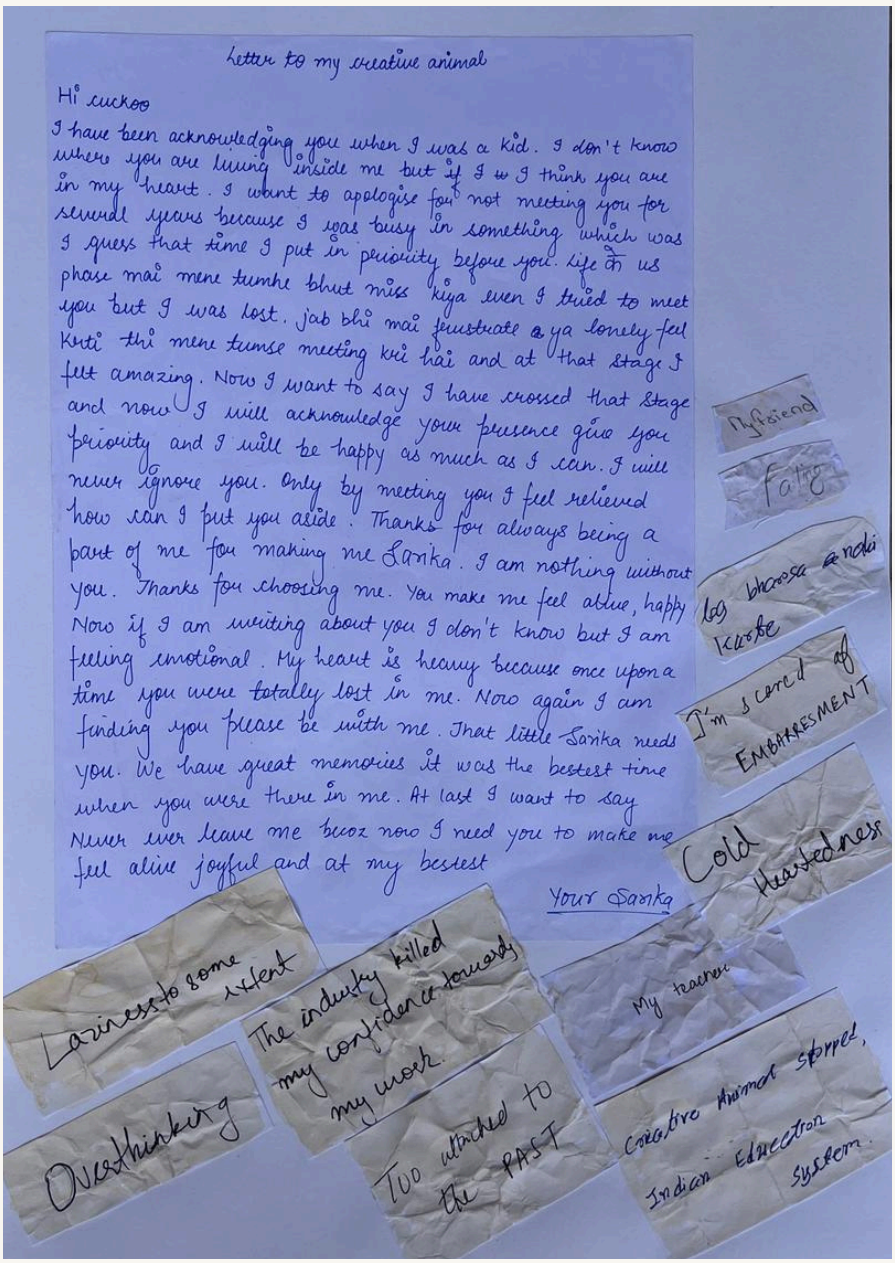
01 · THE LETTER
A LETTER TO A CREATIVE ANIMAL

The process did not begin with a brief. It began with a letter. Written by hand to an imaginary inner guide — the playful, brave, curious part of the self that creates without fear. For a long time, that part felt distant. The letter was the first honest conversation with the creative self after years apart.

The letter was not about producing art. It was about reconnecting.

“before solving anything, I had to remember how to play.”

^ the handwritten letter — the first honest conversation with the creative self



The map of internal blocks

after the painting, i turned the lens inward. one quiet question: what's been holding me back?

i mapped it out — little leaf-shapes, each carrying a block: overthinking · self-doubt · judgement · fear · comparison · low confidence · procrastination · the inner critic

and then i saw it.

one word sat above the rest. perfectionism.

not just another block on the list — the climate the rest grew in.

"perfectionism isn't high standards. it's fear wearing a smart suit."

procrastination, self-doubt, the inner critic — they're not random. they're its children

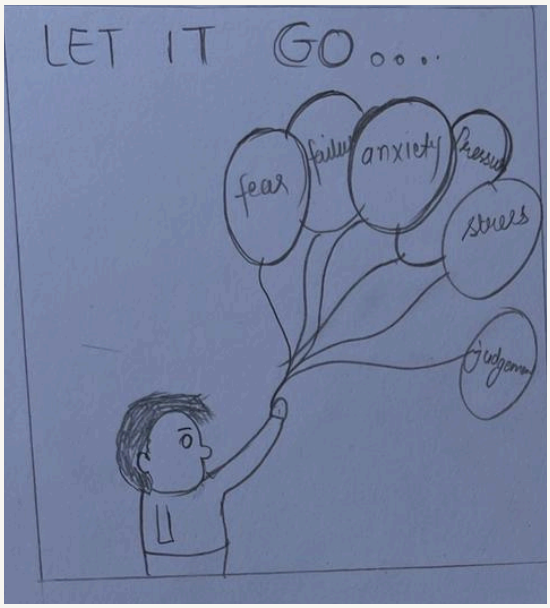
REALLYGREATSITE.COM

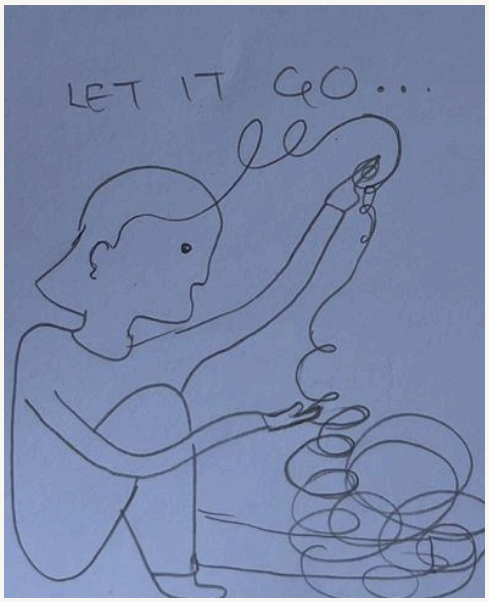
Concept Moodboards

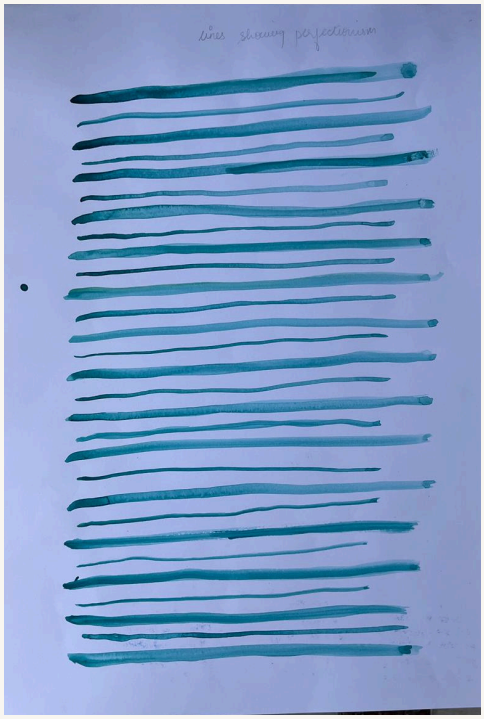
i made mood boards first — for colors, for fonts, for the concept itself. small visual anchors that helped me see the direction before i started building it.

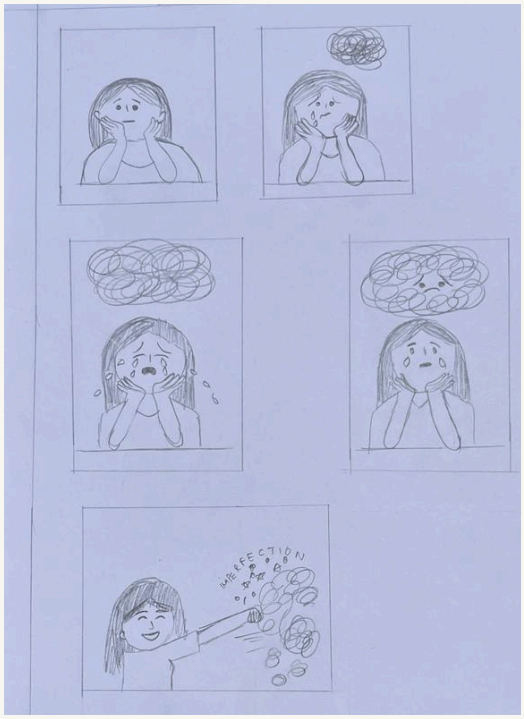
Understanding visuals

i started sketching — lines, patterns, small illustrations — trying to find a form that could carry one single message: how do you let go of perfection?









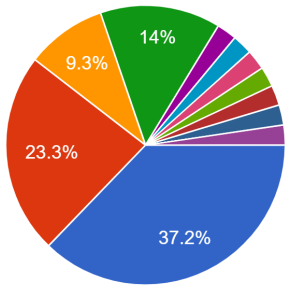
The inner critic

what research says

A survey (through google form) of 41 young adults asked several questions about the inner voice. Their answers became the design brief.

Q6. On your lowest days, which statement feels most true to you?

43 responses

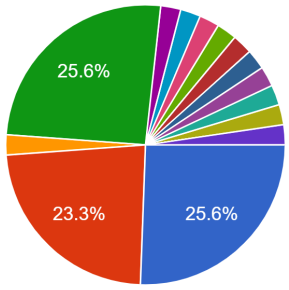


- "Nobody really cares about me"
- "I'm not worthy of love or success"
- "Things will never get better"
- "I'm a burden to people around me"
- All of the above options in some way…
- Tune akele he kiya h.. Tu kr lega
- Why me. Why me! I'm probably difficul…
- Things will get better

1/2

Q5. When you compare yourself to others (on social media or in real life), what thought hits you the hardest?

43 responses

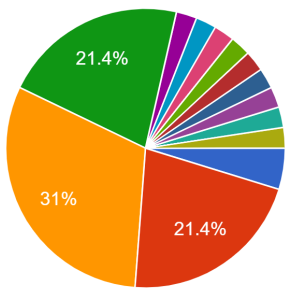


- "I'm so far behind in life"
- "Everyone has it figured out except me"
- "I don't deserve what they have"
- "What's wrong with me?"
- I will also going to achieve
- Chill
- It's ok
- my time will come

1/2

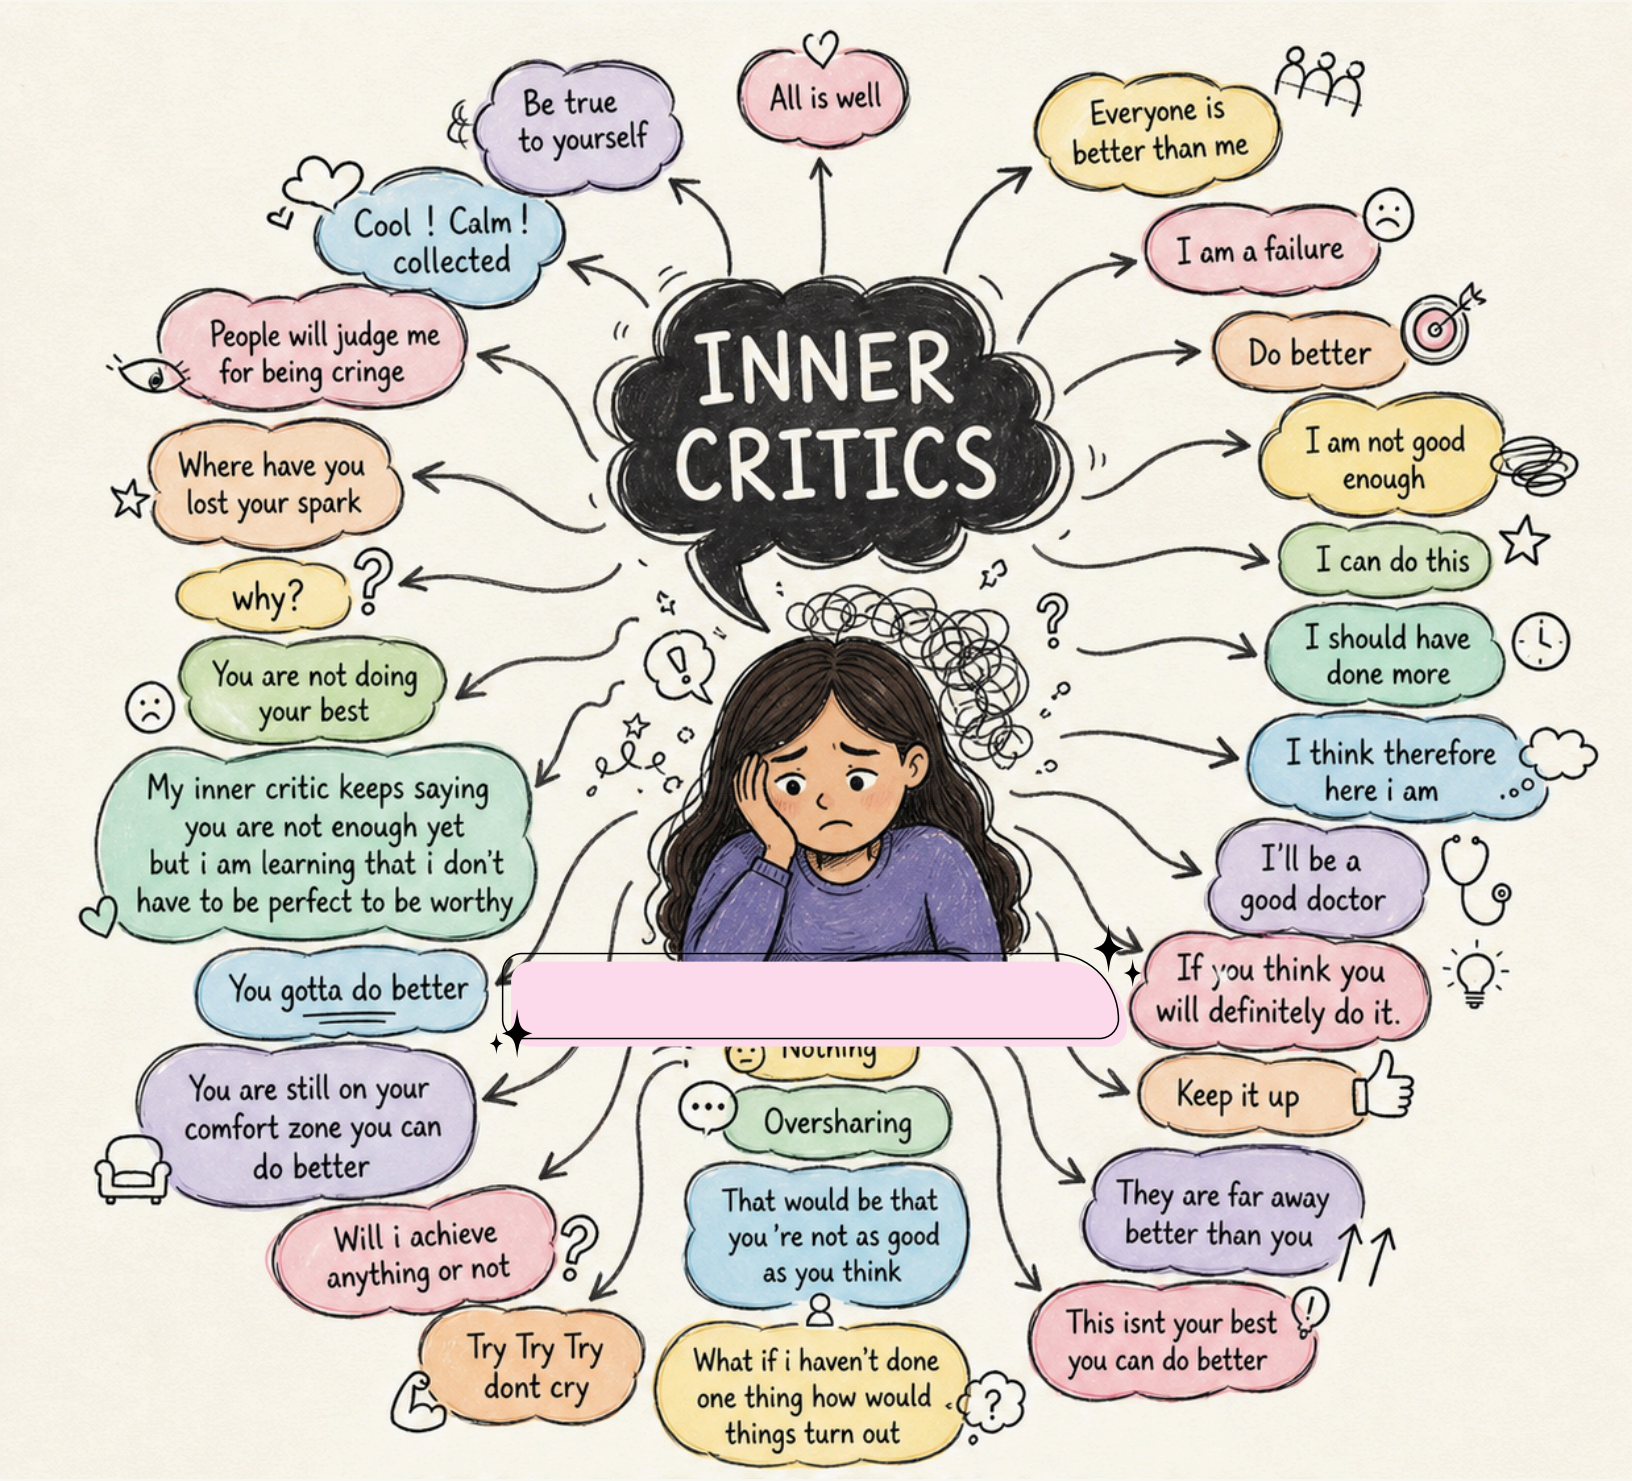
Q4. When you're procrastinating or feeling lazy, what does your inner voice say?

42 responses



- "You're so useless"
- "You'll never achieve anything at this r…
- "Why can't you just be disciplined like…
- "You're wasting your life"
- U can do it
- I'll do better
- I can do the work later , though i know…
- I should get up and work

1/2



through the form I collected the harsh inner-critic voices people carry — the things they quietly say to themselves, every day.
reading them all together was heavy. the same patterns, the same self-blame, in different handwriting.
that's where the goal became clear:
to take this negative self-talk and reframe it — gently, honestly, into something kinder

The Problem

Perfectionists carry a loud inner critic — a voice that says **"I'm not good enough,**" "people will judge me," "if I fail, I'll never be happy." This negative self-talk leaves young adults (18–30) feeling tired, anxious, and afraid to try. They aren't unwell — they just need a small, daily tool to soften the voice.

The Solution

A bathroom-mirror experience that helps users notice the mean thought,rephrase it with a kinder affirmation.

Why It Fits?

It meets perfectionists in the exact moment self-criticism happens — alone, in front of a mirror — and turns that moment into one of self-compassion instead of self-judgement. No new habit to build. No extra effort to remember.

Why a Mirror ?

Research Says

- Veale et al. (peer-reviewed): healthy adults check the mirror around 4 times a day, and nearly 1 in 3 engage in at least one extended mirror session daily.
- GfK cross-country survey (27,000 people): women spend ~5 hrs/week on grooming, men ~3 hrs — the bathroom mirror being the primary site.
- US survey data: roughly two-thirds of adults shower daily, placing them in front of a bathroom mirror at least once a day

MIRAVI

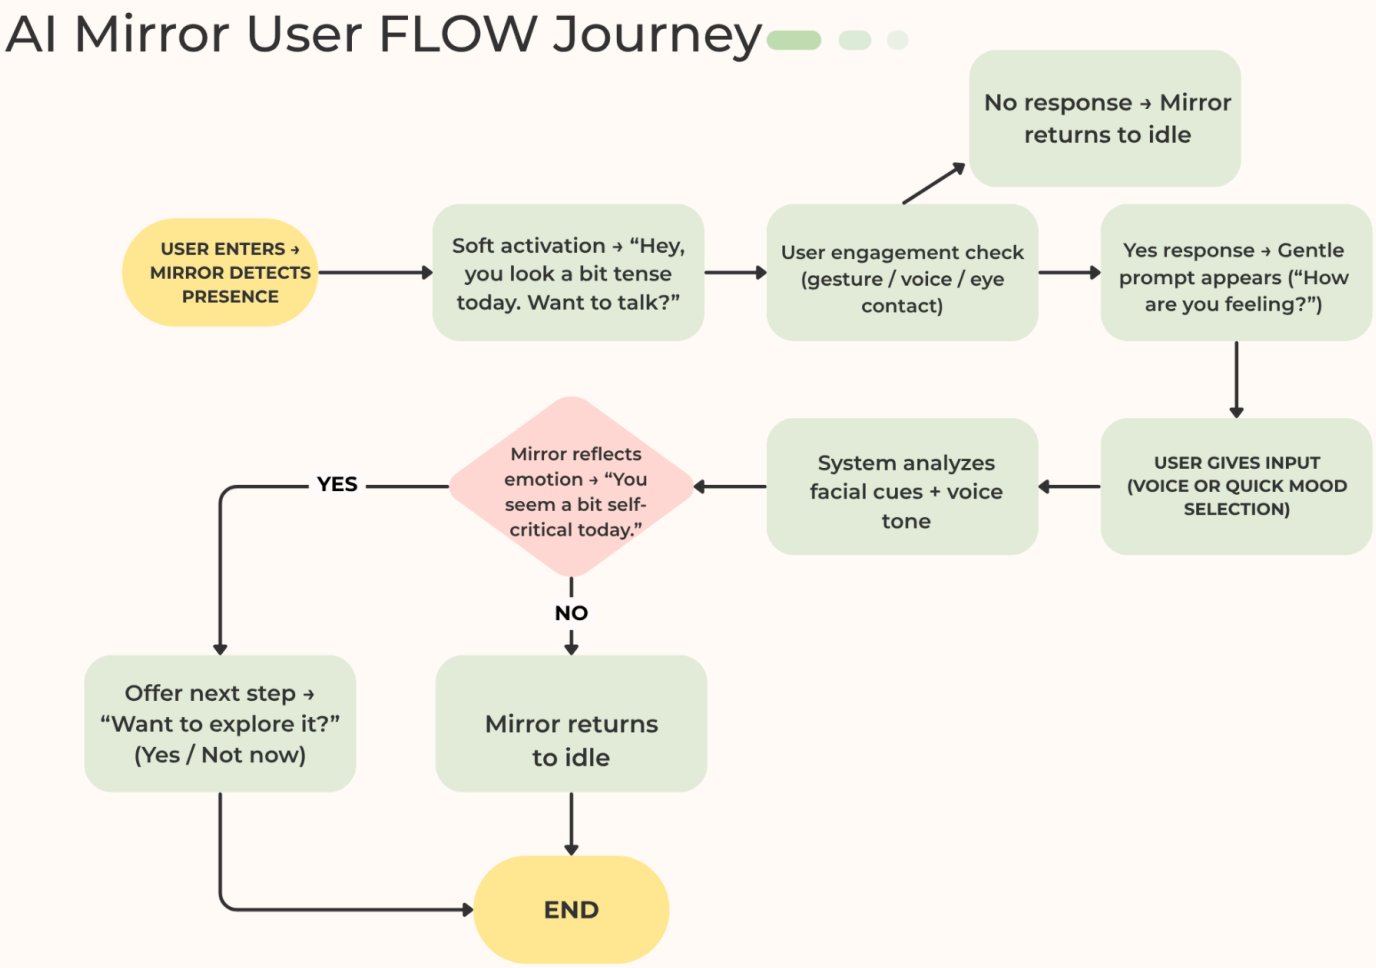
See. Understannd. Grow

i chose lavender as the core color of the icon — a shade that feels calm, comforting, and quietly healing. lavender carries a softness.
The circle felt like the right shape to hold it. no sharp edges. no hierarchy. no beginning or end. just a soft, continuous form.

Final illustration

the illustration feels like someone gently offering a safe space — a quiet "come, sit, you don't have to be okay right now."
there's no pressure in it, no fixing, no advice. just presence. the kind that says you can put the weight down here

User Task Flow



Meet the Mirror That Gets You

Perception Layer

- Walk up and it wakes up. No buttons, no fuss.
- Reads your face, mood, and that "I didn't sleep" posture.
- Hears your voice — even the tired "ughhh" mornings

Intelligence Layer

- Tracks your mood like a quiet little diary.
- Notices when you're being too hard on yourself.
- Talks back gently — think coach, not robot.
- Learns your vibe and grows with you

Interaction Layer

- Soft text floats on the glass.
- Pick a mood: Reflect, Coach, Affirm, or Silent.
- Swipe, gaze, or step back — it gets the hint.
- Or just talk. Say "I feel anxious today" and it listens.

Feedback & Growth Layer

- Logs your moods and little wins each day.
- Spots your triggers before you do.
- Drops sweet reminders like "Your confidence is up 20% this week.

Information Architecture

Core modules : User Detection · Emotion Analysis · Conversation Engine · Behavioural Memory · Progress Analytics.

Data flow: Sensor input → emotion detection → AI response → voice/UI output → user feedback → stored as behavioral data → loop.

User states : Detected → Engaged → Reflecting → Acting → Tracking

Therapeutic Affirmations (Core Voice of the Product)

- "Mistakes are opportunities for growth, not definitions of failure."
- "Your worth is independent of your achievements."
- "Progress is more valuable than perfection."
- "Embracing imperfection is part of being human."
- "I am worthy regardless of my performance

The Mirror — Design & Dimensions

Soft arch, slim frame, warm glow — built to blend in, not shout.

◇ Shape
Arched top, flat bottom

▭ Frame
Matte black aluminum

⚖ Weight
8–12 kg

Height
36–40"

Width
24–28"

Depth
~2"

Glass
High-clarity, touch-sensitive, sealed against steam

Lighting
Warm LED backlight — soft gold to cool white

Screens (8 total)

3 onboarding · 6 core session screens (greeting, mood check, listening, reflection, reframe, end-state) · 1 weekly report · 1 safety/care screen. No settings screen — settings live in voice commands. Eight screens keep the ritual intact.

Color Palette (only 5)

Primary Colors

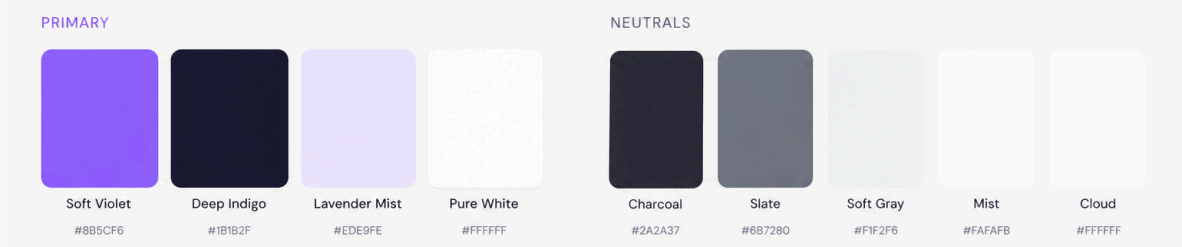
- Soft Violet — #8B5CF6
- Bright lavender purple, soft but vibrant.
- Deep Indigo — #1B1B2F
- Dark navy-indigo, premium and grounding.
- Lavender Mist — #EDE9FE
- Very light pastel lavender.
- Pure White — #FFFFFF

Overall Palette Mood

Soft • Calming • Reflective • Emotional • Safe • Premium • Wellness-focused

Best suited for:

- Mental wellness UI
- AI mirror interfaces
- Meditation/self-reflection apps
- Journaling dashboards
- Feminine minimal interfaces



A mirror that answers back *gently*

Want to talk?

How are you feeling today?

- 😊 I'm good
- 👍 I am okey
- 😐 Not great

or talk to me

You seem a bit

self-critical today.

I'm listening

Today I made a lot of mistakes in my assignments. I feel embarrassed.

That's okay.

"Mistakes are opportunities for growth, not definitions of failure".

Conclusion

It started with a simple question — what if a mirror could do more than just show you?
That one thought slowly turned into something bigger. Not just a product, but a quiet space — one that reflects your mood, your patterns, and the small shifts you usually miss.
Through every stage, the goal stayed the same: keep it human. No flashing screens. No noisy notifications. Just a moment. A pause. A soft check-in before the day pulls you in every direction.
Because in the end, self-awareness doesn't need apps or alerts.

Sometimes, it just needs a mirror — and a moment of honesty
